

Graphical Workflow Engine (GWE)

Graphical Workflow Engine is an add-on solution that provides tools to graphically represent workflows and an easy way to implement processes in ARCHIBUS without any coding.

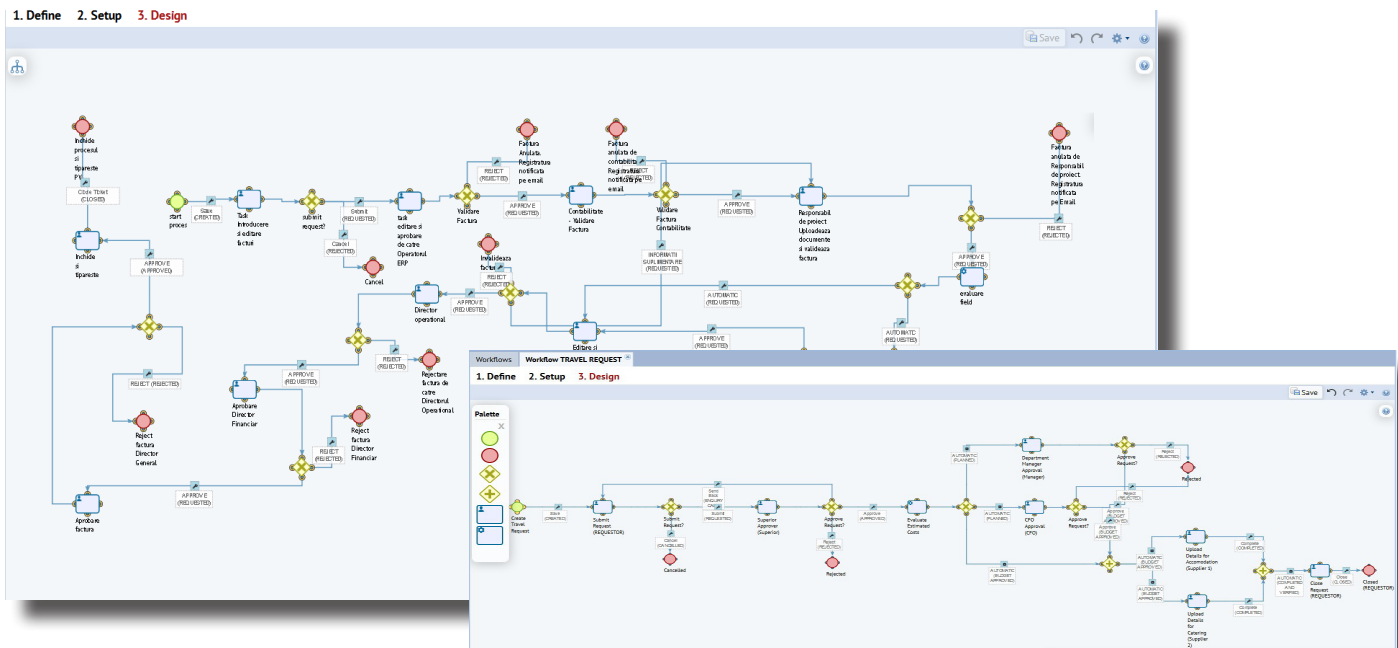

Implementation professionals and teams require the ability to integrate and adjust existing workflows and processes in out-of-the box ARCHIBUS software. They also need to define specific messages and notifications, or simply add or edit events, actions, or requests. This add-in solution offers a graphical process designer tool to easily change views and workflows, as well as service desk roles and security groups, without any extra coding. Graphical Workflow Engine add-on, developed by ARCHIBUS Solution Center - Romania, reduces the effort needed to implement changes in the workflows using an intuitive graphical definition wizard for all activities and management views.

Key Features

- Easy definition of responsible Roles
- Three Simple Steps: Define, Design and Go
- Request Management Console
- On the fly Add Notifications, Actions and other Events
- Design Workflow Management Views
- ARCHIBUS View Generator
- Graphical Drag&Drop Workflow Business Process
- Graphical visualization of Request Status
- View Definition Wizard
- Plus Many More...**

Benefits

- No programming needed for workflow definitions
- Reduced errors in process definition
- Reduced implementation workload
- Reduced implementation cost
- Client satisfaction leverage
- Effortless update and optimization of business processes
- No impact on upgrades
